

# Kelle Clark Project 1 Team Assessment CV/DIP course

Team: Chilcoat, Clark, Heath

August 2020

Table 1: Team Assessment.

	<b>Self-assessment</b>	<b>Team member 1</b>	<b>Team member 2</b>
attended meetings	5	5	5
communicated	5	5	5
participated	5	5	5
contributed	5	5	5
provided feedback	5	5	5
positive attitude	5	5	5

Elizabeth, Michael and I worked well as a team. It started out rough with none of us knowing really how to use Visual Studio and program in C++ (or C) really. Michael and I had a difficult time, and Elizabeth was extremely patient. We spent some time trying to work through the provided example code and shared info found online. We made headway as soon as we were able to move to Python, where we all felt comfortable. I was on a Windows system and Elizabeth/Michael could toggle between MacOS and Windows. It ended up advantageous that we could code/test on different platforms.

We followed an incremental approach to our design, starting with traversing the directories then building the Tk to house the images. The different functions were at first key strokes and then to buttons. We all contributed and provided comment through Team Channel for our group. The code version management was not the greatest without gitlabs, but we did it...uploading to files on our Team channel whenever we wanted to share and doing side-by-side comparisons in Visual Studio Code. It worked.

The rapport with my teammates was good, they are both quiet and prefer to work and keep updates posted frequently on chat..not big on calls. This was fine with me. Feedback was almost instantaneous and we talked about options without any arguments.
